

The background is a dark blue gradient with faint, light blue geometric patterns. On the left side, there are several concentric circles and a large circular scale with numerical markings from 140 to 260. Arrows indicate a clockwise direction of movement. The overall aesthetic is technical and futuristic.

MOVIE RECOMMENDER SYSTEMS

FROM FIRST VISIT, EXPLORING DIFFERENT SYSTEMS OF
RECOMMENDATIONS TO SUIT DIFFERENT BUSINESS NEEDS

EVE BEN EZRA

WHAT IS A RECOMMENDER SYSTEM?

- A Recommender System refers to any customization of items that 'recommends' other items. They can be personalized or universal, and their applications are endless.
- Recommender systems are widely applicable, from Netflix recommending what movie you should watch next to the New York Times recommending popular articles, to voting systems on sites like Reddit and Hacker News
- Generally recommender systems are content-based or collaborative (based on preferences) and lie on a spectrum of personalization. Recommenders can also be popularity-based, or a hybrid of these features.
- A variety of data can be used. Examples: movie metadata, how many minutes of a YouTube video you watch, a 'thumbs-up' or 'thumbs-down' on Pandora, a 'heart' on Spotify, a click on a NYT article, or engagement with an Instagram Ad.

THE IDEA

- A new app works similarly to the iTunes store, recommending movies and outsourcing to buy or rent the movie, or indicating where the movie can be streamed.
- When you sign up, there will be 0 data on you, the user, so the recommender will ask you to put in one of your favorite movies and return suggestions based on that using NLP off movie metadata (plot, rating, writer, director, actors, release year, language, and country). There will also be Universally-available popularity charts.
- Internal data (clicking on movies) and external data (the user clicking) is gathered, and a secondary recommender system works to provide more and more personalized results through collaborative recommending and hybrid systems

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- A simple filter that considers movies whose total votes are in the 95th percentile and whose scores are above average.
- Completely non-personalized, every user sees the same list. This is a 'top 250 movies' list
- Based on the idea that 'Hey, if 1 million people like it, you probably will too!'
- Popularity recommenders are used on websites like the New York Time's 'What's Popular', IMDB's top 250 movies list, Reddit's r/all, and more.
- This simple recommender uses all of the data in my scraped dataset, and has an initial shape of (265417, 19)
- Notebook and code: <http://bit.ly/eb-poprec>

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- Make a list of 'qualified' movies, using the total number of IMDB ratings and the average movie ratings.
- The fewer total ratings a movie has, the more an individual rating can influence the overall rating. To prevent massive swinging in rankings, a weighted average is used.
- Process: if a movie has beyond a certain number of votes x , its rating won't be impacted by the transformation. For a movie below that threshold, we will add in a number of votes to bring the total rating up to x , where each of those votes is the mean rating for all movies. This helps the stability of the chart. In this case:

$$(WR) = (v \div (v+m)) \times R + (m \div (v+m)) \times C$$

Where:

R = average rating R for the movie

v = the number of votes cast for the movie

m = the minimum vote threshold required

C = the mean rating of **all** movies

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

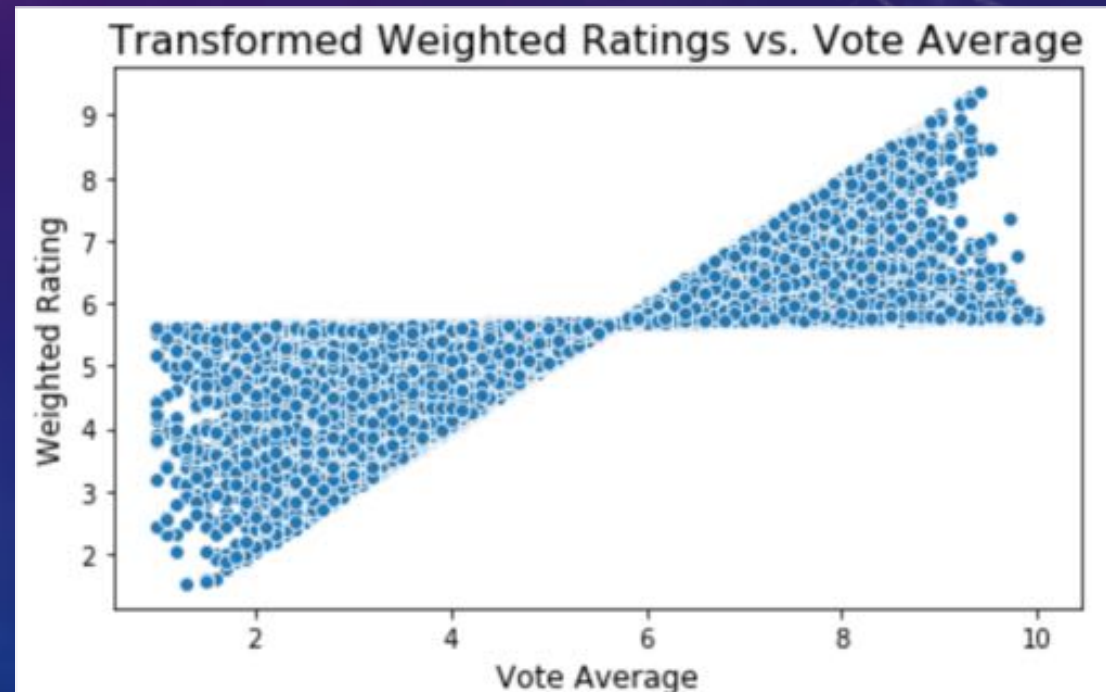

Movies with most votes

	title	imdb_votes	imdb_rating	weighted_rating
	The Shawshank Redemption	2084570.0	9.3	9.299422
	The Dark Knight	2056482.0	9.0	8.999463
	Inception	1826846.0	8.8	8.799432
	Fight Club	1665349.0	8.8	8.799377
	Pulp Fiction	1632190.0	8.9	8.899344
	Forrest Gump	1598520.0	8.8	8.799351
	The Lord of the Rings: The Fellowship of the Ring	1503756.0	8.8	8.799310
	The Matrix	1500156.0	8.7	8.699330
	The Lord of the Rings: The Return of the King	1477575.0	8.9	8.899275
	The Godfather	1425400.0	9.2	9.199178

Movies with least votes

	title	imdb_votes	imdb_rating	weighted_rating
	Cradlesong	5.0	2.8	5.640999
	The Most Gigantic Lying Mouth of All Time	5.0	7.6	5.725705
	Good Morning	5.0	6.4	5.704529
	Burning Calcutta	5.0	8.4	5.739823
	A Miracle from Heaven	5.0	5.8	5.693940
	Fu shi	5.0	5.6	5.690411
	Fondali notturni	5.0	7.2	5.718646
	Fine pena mai	5.0	5.2	5.683352
	Dou ji	5.0	5.0	5.679823
	Boishommo	5.0	6.8	5.711587

Overall, this lowered the global mean from ~7 to around 5.5-6

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- The distribution of votes follows a 'long tail' distribution.
- Typically in these distributions, the majority of occurrences are accounted for by the first 20% of items in the distribution.
- Total movies a year vs. big blockbuster hits
- These distributions are important in many recommenders as we consider the entire dataset, and what sort of 'novelty' and 'diversity' we want in our recommendations. A thorough recommender will consider the entire set, not just the Avatars of the movie world.

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- Our initial list considers all 265,417 movies in our dataset, released from 1891 to 2019.
- Our 'qualified list' contains movies with more than 7691 votes and with an unweighted rating above 6.14

title	year	imdb_votes	imdb_rating	weighted_rating	genre
The Chaos Class	1975	33306	9	9.363186	Comedy, Drama
The Shawshank Redemption	1994	2084570	9	9.299422	Drama

Saban, Son of Saban	1977	12823	8	8.818570	Comedy, Crime, Mystery

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- There are many different ways to make popular charts.
- The previous chart showed all movies available. Next we look at movies worldwide from 1990 or later.
- This time, the 95th percentile for ratings is 11,707 votes, and the average score is 6.13. Only movies that meet both these requirements will be considered.
- Our results still contain foreign films, though we see many more US blockbusters

	title	year	imdb_votes	imdb_rating	weighted_rating
	The Shawshank Redemption	1994	2084570.0	9.3	9.299422
	Aynabaji	2016	18209.0	9.3	9.235016
	Wheels	2014	17281.0	9.3	9.231593
	CM101MMXI Fundamentals	2013	41371.0	9.2	9.171907
	The Dark Knight	2008	2056482.0	9.0	8.999463
	Pulp Fiction	1994	1632190.0	8.9	8.899344
	The Lord of the Rings: The Return of the King	2003	1477575.0	8.9	8.899275
	Schindler's List	1993	1077467.0	8.9	8.899006
	Avengers: Endgame	2019	360133.0	8.9	8.897028
	Inception	2010	1826846.0	8.8	8.799432
	Fight Club	1999	1665349.0	8.8	8.799377
	Forrest Gump	1994	1598520.0	8.8	8.799351
	The Lord of the Rings: The Fellowship of the Ring	2001	1503756.0	8.8	8.799310
	Drishyam	2013	23810.0	8.8	8.757007
	Anbe Sivam	2003	12670.0	8.8	8.720180

	The Lord of the Rings: The Two Towers	2002	1343746.0	8.7	8.699253
	Goodfellas	1990	897033.0	8.7	8.698880
	Earthlings	2005	16063.0	8.7	8.638733
	Pretty Village, Pretty Flame	1996	13185.0	8.7	8.625691

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- Lastly we make a theoretical 'US-Centric' popularity recommendation. We filter out foreign films like Bollywood hits, leaving only Hollywood's greatest movies, as decided by users.
- This list was generated using movies in The Movie Dataset, which is Hollywood-centric and has a base set of 45,466 movies.
- Our cutoffs for this set were 434 votes and a rating of 5.62
- Depending on our cutoffs, movies that appear on some lists would be filtered out and not qualify for others

title	vote_average	vote_count	weighted_rating
The Shawshank Redemption	8.5	8358.0	8.486814
The Godfather	8.5	6024.0	8.481734
Your Name.	8.5	1030.0	8.396081
The Dark Knight	8.3	12269.0	8.291558
Fight Club	8.3	9678.0	8.289306
Pulp Fiction	8.3	8670.0	8.288067
Schindler's List	8.3	4436.0	8.276767
Whiplash	8.3	4376.0	8.276451
Spirited Away	8.3	3968.0	8.274051
Life Is Beautiful	8.3	3643.0	8.271758
The Godfather: Part II	8.3	3418.0	8.269918
One Flew Over the Cuckoo's Nest	8.3	3001.0	8.265786
Psycho	8.3	2405.0	8.257429
Once Upon a Time in America	8.3	1104.0	8.208803
Forrest Gump	8.2	8147.0	8.187720
The Empire Strikes Back	8.2	5998.0	8.183346
The Intouchables	8.2	5410.0	8.181548
Leon: The Professional	8.2	4293.0	8.176785
The Green Mile	8.2	4166.0	8.176083
GoodFellas	8.2	3211.0	8.169047

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

- We can also use this method to make top-n charts of different movie genres, languages, newness, or other features
- Slightly more personalized: filtering out movies the user has rated or watched

Top 10 for Japanese Language

1ST RECOMMENDER: NON-PERSONALIZED POPULARITY

Implementation

- Popularity charts are a good starting point, but they lack personalization.
- A good starting point, but due to the long-tail effect, but due to the long-tail effect, our hardcore movie buffs will be disappointed by the lack of novelty and diversity.
- People who don't like high fantasy will not like Lord of the Rings, no matter how popular it is.

Evaluation

- A/B testing, taking initial data and tuning by looking at increased activity with charts, increased movies rented/sold, or other metrics.
- Potential quantitative evaluation by looking at other features, such as total revenue, and comparing with movies selected as 'popular'. The most popular movies will be the ones that make the most money.

2ND RECOMMENDER: CONTENT-BASED

- Recommends based on metadata (plot, genres, actors, director, etc)
- Non-personalized: each user gets back the same results based on search queries and filtering.
- Based on mathematical vector similarity
- Notebook: <http://bit.ly/bow-cosim>

2ND RECOMMENDER: CONTENT-BASED

PREPROCESSING THE TEXT

- Manually tokenizing the text, and using nltk-rake as a keyword extractor for plots
- For the names of actors, directors, and writers, put the first and last names together (John Lasseter becomes johnlasseter)
- Features included: MPAA rating, writer, genres, director, actors, language, country, year, and key words extracted from plot
- Scale: filtered movies down to ~55,000 to make computation manageable: a 55,000x55,000 matrix has just over 3 billion entries. A 100,000-movie matrix has 10 billion.
- Filtered movies by date (included after 1900 only), popularity (41th percentile and above in terms of total votes), and rating (unweighted rating in the 31st percentile or above)

title_year	rated	writer	genre	director	actors	language	country	year	Key_words

2ND RECOMMENDER: CONTENT-BASED COSINE SIMILARITY

- Using `CountVectorizer()`, we tokenize our bag of words and create count vectors for each movie
- This creates a huge sparse matrix
- We compute cosine similarity for all the count vectors, and are returned an $n \times n$ matrix of cosine similarities
- We return the movies with the highest cosine similarities, sorted by their weighted IMDB rating

2ND RECOMMENDER: CONTENT-BASED COSINE SIMILARITY

- The recommendations for some movies make more sense than for others, but throughout all of them, the algorithm managed to capture the themes that run through movies
- Movies returned for LoTR all have common thematic elements such as: power attracting the corruptible, inevitable loss, emotional struggle in the face of sacrifice, and how its worth it anyway

Here are the movie recommendations for The Lord of the Rings: The Fellowship of the Ring (2001):

Out[31]:

	rated	plot	year	genre	director	actors	language	weighted_rating

The Pink Panther (2006)	PG
Fantastic Mr. Fox (2009)	PG
Porco Rosso (1992)	PG

2ND RECOMMENDER: CONTENT-BASED COSINE SIMILARITY

Evaluation

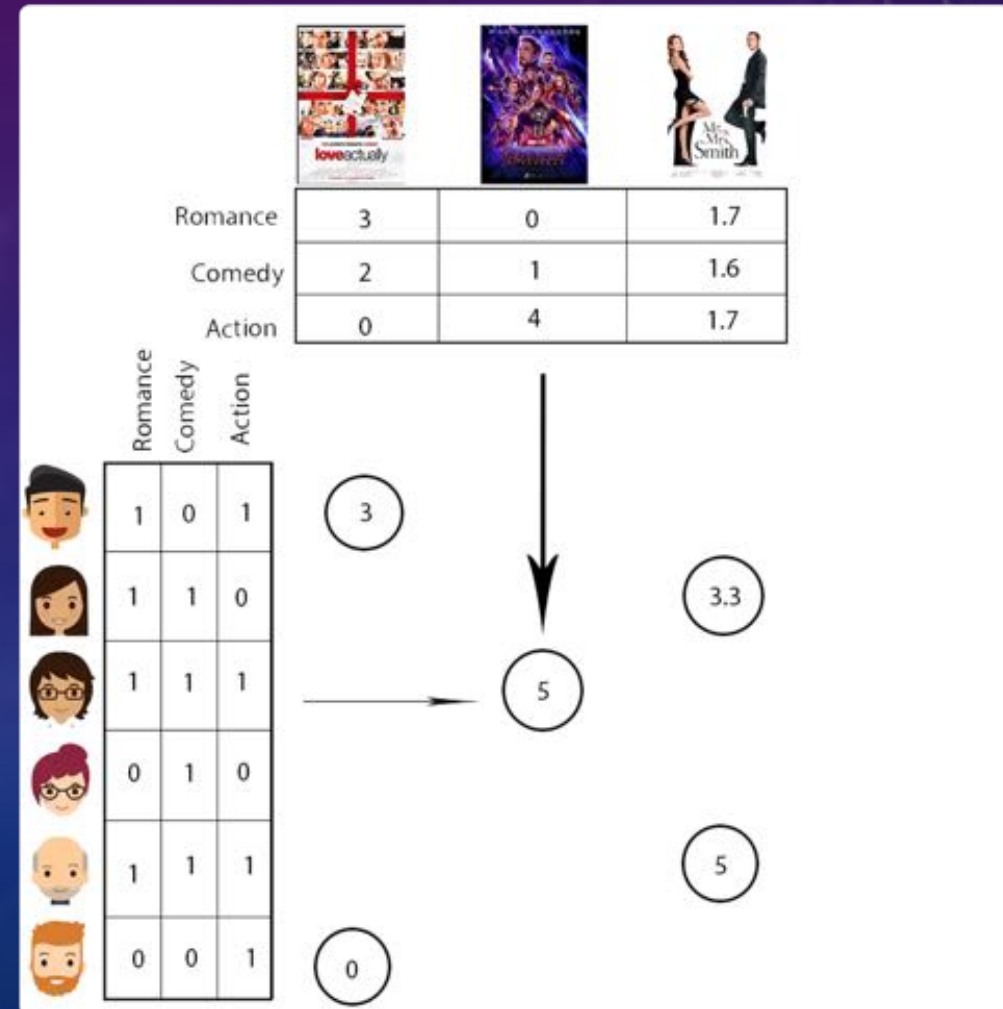

- Cosine similarity doesn't scale well, making it difficult to add more movies as it continues to take up computational power and memory (alternative for scale is tf-idf vectorization and pairwise_kernel, which parallelizes the process. Since tf-idf vectors are weighted, the dot product is equivalent to the cosine similarity).
- Evaluation is qualitative, looking at the results, trying different methods and weights, including or taking out features (ex: adding a director's name 3 times)
- User-generated feedback, where users have the ability to add 'genres' and vote on them, giving us more keywords like 'High fantasy' vs fantasy, tuning our results.

Further Tuning

- Possibilities of further filtering and tuning along the lines of the popularity recommender: filtering out certain genres or using them in tandem, returning the top n list of popular movies along with similar movies using cosine similarity.
- Could also introduce other filters for increased variety/diversity: no films with the same director, or only films from a certain year on.
- Allowing users to thumbs-up or thumbs-down on recommendations and considering those weights in the recalculations

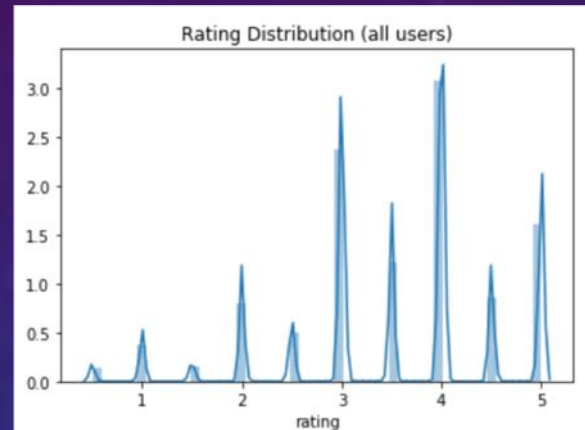

3RD RECOMMENDER: COLLABORATIVE MATRIX FACTORIZATION

- Factors out a sparse matrix of movies and user ratings into two distinct matrices (item and user)
- Predicts what a user would rate a movie based on hidden features
- Predicted rating is the dot product of these features, or embeddings
- The algorithm uses a method called stochastic gradient descent to minimize the error

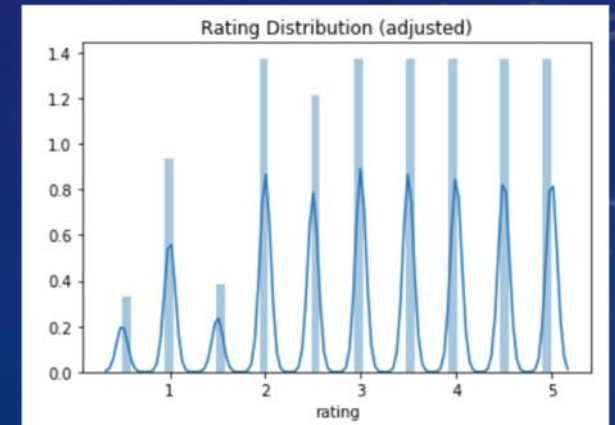

3RD RECOMMENDER: COLLABORATIVE MATRIX FACTORIZATION

- Datasets used: **The Movie Dataset** (26,024,289 ratings from 120184 users on 4574 movies) and the MovieLens 20M dataset (20,000,263 ratings from 138,493 users on 26,744 movies)
- Algorithms: SVD and SVDpp
- Training and tuning: GridSearchCV, RMSE (stochastic gradient descent)
- Best performing algorithm: SVD, 5-fold CV, 20 epochs, learning rate 0.005, regularization term 0.02
- RMSE of test set: [0.7862, 0.7856, 0.7856, 0.7864, 0.7858]
- Training time: 1.47 hours (88 minutes)
- Final model: <http://bit.ly/eb-svd>

3RD RECOMMENDER: COLLABORATIVE EVALUATION

- Recommend new movies by filtering out movies already watched by the user, calculating the estimated rating on some (or all) of the remaining movies, and return the results sorted by the estimated rating.
- Some movies are highly rated by many users and this might have to do with the average rating of the movie, (the more popular the movie and the more highly rated overall, the more likely to be returned for all users)

User 118205 (9254 Ratings)

	title	est
	Frozen Planet (2011)	4.35

3RD RECOMMENDER: COLLABORATIVE EVALUATION

- RMSE could probably be further reduced by careful filtering of the initial ratings dataframe
- Taking out users with too many or too few reviews (bots or critics / noise)
- Taking out movies with too many or too few ratings (noise)
- Weighted or dynamic (users encouraged to 'thumbs up' or 'thumbs down' movies based on relevance)

4TH RECOMMENDER: HYBRID

SVD + COSINE SIMILARITY

- The final recommender combines cosine similarity scores and predicted user ratings
- A user enters a movie they liked and are returned a personalized list of movies they haven't yet rated/watched, ordered by their predicted rating
- Notebook: <http://bit.ly/eb-hybrid> (github) or <http://bit.ly/nb-hybrid> (nbviewer)

RECAP

Users can now use the app in a variety of ways, with various levels of engagement:

- Users who don't want to sign up for an account can view popularity charts and sort/filter them by categories (language, genre, actor, etc)
- Users who want a bit more depth and variety (outside of top charts) can use content filters to get similar, less-known movies. These results can be filtered by their weighted rating (bringing a popularity aspect to it), or simply returned from highest to lowest similarity
- Users who want to sign up and set preferences can get personalized recommendations or use a 'recommend a random movie' feature. The user's tastes are considered against the entire database and returned in order of the user's estimated rating.
- Users who want personalized recommendations of a movie they've previously liked can filter their results by movies they haven't watched, or include all of them (leading to the opportunity for re-watching movies they've forgotten about)

OTHER CONSIDERATIONS

- Though systems like this are seen on many movie-streaming sites, this site takes into account an entire database of movies and outsources the streaming/buying/downloading, acting as a go-between for users who want movie recommendations but don't want to be limited by a certain site's catalogue.
- Movies can be automatically recommended for users based on movies they've already rated highly.
- Tastes change! The user's past ratings would have to eventually expire or be weighted to be less impactful than recent ratings.
- Exact user scores don't have to be given back to users: instead the layout could be more of a "We think you'd like this!" instead of "We think you'd rate this 4 stars!" while still being ordered by estimated rating internally
